ABSENTEE BIDDING

Absentee bidding can be made in confidence with any representative, the auctioneer, online at NorthernLivestockVideo.com or directly with Nissen Angus. We will also have phone representatives available on sale day as well if you prefer to bid over the phone.

Online and phone bidding available at
www.northernlivestockvideo.com
See page 2 for instructions.

SIGHT UNSEEN GUARANTEE

We are confident that you will be happy with any absentee purchases you make. However, if for any reason you aren't satisfied upon delivery, you are not obligated to own the bull. **We guarantee 100% satisfaction on all purchases.**

INSPECTION

The bulls are on feed and available for viewing at Hould Bull Development Center, located at 5867 Hwy 363 southwest of Malta, MT. They will be available for inspection at the Blaine County Fairgrounds in Chinook, MT starting the afternoon of Monday, April 4th.

FIRST SEASON BREEDING GUARANTEE

Bulls are guaranteed to be sound and healthy breeders with a first breeding season guarantee. Breeding season is defined as the first 60 days following turnout. All bulls selling will be given 50% of the value of the injured bull minus salvage value as credit in a future sale or towards a replacement bull if one is available. **Please contact us as soon as possible should an injury occur.**

VIDEOS OF THE BULLS ARE AVAILABLE AT

www.nissenangus.com
www.northernlivestockvideo.com

HEALTH

All bulls have been semen tested and given a complete breeding physical by Dr. Brock Aiton of Aiton Veterinary Services, (406)390-5029. They are current on immunizations, have been vaccinated with Fusoguard for footrot and tested negative for BVD-PI.

TERMS AND CONDITIONS

This sale is being conducted under the suggested sale terms and conditions adopted by the American Angus Association. Announcements from the auction block take precedence over the information in this catalog. Settlement must be at time of sale unless prior arrangements have been made with Nissen Angus.

SALE ORDER

Bulls will sell in catalog order.

RETAINED INTEREST

Nissen Angus is retaining 1/3 revenue share on every bull sold in this sale. This allows for the right to share in the collection of semen and the right to share semen and certificate revenue should the opportunity arise. **Full possession and full salvage value sells on all bulls.**

TRUCKING AND DELIVERY

We will offer free delivery within Montana on all bulls purchased. Further distances will be billed at cost. **Buyers who pick up their bulls at the sale site on sale day or the day after will be given a \$50 rebate per bull.**

PERFORMANCE INFORMATION

EPDs are current as of March 4, 2022. Updated EPDs can be viewed online at www.angus.org. All bulls selling were HD50K tested and their EPDs are genomically enhanced. All bulls were ultrasounded for carcass merit by AAA certified technician, Sonja Gregory. Scrotal measurements will be available sale day.

All bulls selling have genomically enhanced EPDs via Zoetis HD50K testing

ACCOMADATIONS

Chinook Motor Inn 406-357-2248
Bear Paw Court 406-357-2221

AIRPORT

Edgar G. Obie Airport - Located on the west side of Chinook. Please call 406-357-2643 in advance to make arrangements

LIABILITY

All persons who attend the sale do so at their own risk. Nissen Angus and all other sale staff assume no liability, legal or otherwise.

**PLEASE BRING THIS CATALOG
WITH YOU ON SALE DAY**

Hello Fellow Producers!

We'd like to invite you to our **Annual Production Sale on April 6th at the Blaine County Fairgrounds in Chinook, MT.** The bulls will be available at the fairgrounds for viewing on the afternoon of Monday, April 4th.

2021 proved to be a challenging year to say the least. Lack of winter and spring moisture really hurt the grass production and water we rely for the livestock. Along with the drought, the grasshoppers did their part in taking a toll on hay production and the rangeland too. Despite all the challenges, we continue to keep moving forward and choose to be optimistic about the future - holding on to the thought that "each day is closer to rain".

As you go through the catalog, you will notice our weaning weights are down quite a bit. Despite the fact that they went into the feedlot lighter, the bulls proved to gain at a steady pace and we are proud of how they developed. Our cows proved themselves as well - we had really good breed up on all age groups this year.

We continue to grow our herd in quality - we are focusing on mother cows that exhibit performance, structural correctness, strong maternal traits and carcass ability - all in a low-input, practical package. We are working hard to provide our customers with low maintenance, highly functional cattle that perform and pay in pounds. Our customer's success is a direct reflection of our program's success and we place a big emphasis on making sure you are happy with your purchase.

All the bulls have been parent verified, carcass ultrasounded, performance and fertility tested. To provide you with the most predictable and accurate selection tools, **we have also HD50K tested every bull in our sale offering.** These genomic-enhanced EPDs offer increased predictability and valuable insight for the selection process. We have continued to ultrasound our bulls for carcass merit. We feel it's important to provide that data along with all the other selection tools as it gives you a complete representation of each bull's full potential.

The bulls are on feed at Hould Bull Development Center west of Malta, MT and available for you to view at any time. The bulls have been fed a high roughage ration to ensure soundness and longevity. All have been given Fusogard to help prevent footrot and tested negative for BVD-PI. Our sincere thanks goes to Bruce, Linda, Lance and their crew for the great care they give these bulls. They are great to work with and always accommodate everyone's schedules and deadlines. It gives us a great peace of mind knowing our bulls are in such great hands.

We are blessed to be surrounded by family and friends who support us. We could not do what we love to do without them. Sale time is one of our most favorite times of the year and it is truly a family affair. We enjoy catching up with friends and family on sale day and invite you to join us for lunch and stay for our "friends and family" social after the sale.

Our sincere thanks for your friendship and support throughout the years - we look forward to working with you for many years to come. Please feel free to call us if you would like additional information on the bulls or if you have any questions about our program. Please stop by and view the sale offering and join us for lunch on April 6th. See you then!

Jeff, Christie, Charley & Tyson Nissen

BIRTH WEIGHT & CALVING EASE

University studies in Wyoming and data from Montana and Colorado lend credence to the following conclusions:

1. The birth weight itself influences calving ease by 65%.
2. The female has 60-70% influence on birth weight of her calf.
3. The bull has 30-40% influence on birth weight of his progeny.
4. Pelvic measurement and angle as well as the shape of the calf have 35-40% influence on calving ease.
5. Length of gestation greatly affects birth weight. A fetus can gain over one pound per day in the last days of gestation.
6. Weather and temperature the last 30 days affect the length of gestation.
7. Size and maturity of the cow influence calving ease.

Most commercial producers do not take birth weights. Guessing is as inaccurate as driving with a broken speedometer – what's thought to be 55 mph may in fact be 65 or 70 mpg, and what's thought to be 70-80 lb. may actually be 80-90 lb. Remember, everything is relevant. Increased growth, frame and performance will increase BW. A longer-bodied calf will weigh more. If a calf is expected to have genetics for growth, it will display this prior to birth as well as after. As a rule of thumb, it takes a calf weighing 85 lb. at birth to finish at 1200-1250 lb. A cow should easily give birth to a calf weighing 8% of her own body weight. Thus, a 1200 lb. cow should give birth to a 96 lb. calf with ease.

Continued selection for light birth weights will ultimately reduce the mature sizes and performance of your cattle.

The statement above has been published countless times in numerous catalogs and publications and we feel it does a great job illustrating the whole picture in regards to birthweight and calving ease.

While birth weight is always something to take into consideration, we feel that calving ease should be utilized just as much when selecting a bull. Those higher birthweight calves that calve easy and unassisted, thrive from the start and are at the top of the pack come weaning time.

Those are the ones that bring you the most bang for your buck when you are getting paid by the pound.

ONLINE & PHONE BIDDING OPTIONS

Can't make it sale day? We've got you covered! We know how hard it can be this time of year to get away from the place to make it to town or how unexpected weather can throw a wrench into your plans last minute. This year we have added the option of online bidding to give you the opportunity to purchase bulls at your convenience from just about anywhere!

Northern Livestock Video has an online desktop and mobile friendly bidding platform. They also have a phone bidding option if you are not comfortable bidding online and would like to be on the phone with a representative.

Online Bidding:

1. *Pre-Register at least one day prior to the sale.*
2. *Go to bid.northernlivestockvideo.com and click "Get Approved to Bid".*
3. *Doing this will prompt you to create an account, after which you will fill out a bidder approval application.*
4. *Once Approved, an email will be sent to the email account provided, please click the link in that email to activate your account and a buyer number will be provided.*
5. *On sale day (after approval), visit www.northernlivestockvideo.com to view and bid!*

*Google Chrome is the preferred web browser for viewing Northern Livestock Video Sales
Please visit www.northernlivestockvideo.com for instructions on downloading and using the mobile bidding app.
For technical assistance with Internet Viewing and Bidding Questions, call Sam Fraser 406-860-0590.*

Phone Bidding:

Anyone wanting to use the Northern Livestock phone bank to bid must pre-register and have a bid number to bid on the phone.

1. *To register with NLVA call 866-616-5035 Before Sale Day.*
2. *View the Online CATALOG and VIDEO CLIP of each BULL selling at www.northernlivestockvideo.com.*
3. *Bidders who are successful in making purchases will be contacted following the sale to make payment and delivery arrangements.*

Northern Livestock's Sale Day Bid Line: 1-406-245-0889.

Don't buy an imposter.

Not all "Angus" bulls are **REGISTERED** Angus bulls.

If you see this logo in conjunction with an individual animal or group of animals, you know that that animal is registered with the American Angus Association and backed by the power of **data, programs** and **pedigrees** of the Association.

Invest wisely in those that carry the **Powered By Angus** logo.

Look for the **REGISTRATION NUMBER**.

For more information on the Powered By Angus program, visit:
Angus.org/PBA.

American Angus Association Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docity (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

FOOT SCORE

Claw Set (Claw), is expressed in units of claw-set score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal claw set, which is toes that are symmetrical, even and appropriately spaced.

Foot Angle (Angle), is expressed in units of foot-angle score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal foot angle, which is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass traits where the units of measure are in trait format and analyzed on an age-constant basis.

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. Increased selection pressure on \$W increases weaning and maternal milk traits while increasing mature cow size.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals. Components for computing \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase, and market these animals on a quality-based carcass grid.

Capitalist is a calving ease sire that transmits exceptional growth to his offspring. The offspring have lots of performance and style. Look for Capitalist to improve structure and foot quality. We were very impressed with his first calf crop and used him heavily again this past AI season. We are excited to see how the females develop and mature.

Resilient was the high selling bull at the Sitz Angus Ranch 2019 Fall Bull Sale for \$165,000! He brings maternal power in a deep bodied, wide based package. This sale represents our first calves from Resilient. They are attractive and both bulls and females have performed well. He was one of our main AI sires in 2021 and we are excited about the impact he will have on our program.

This bull puts it all together. Phenotypically powerful with a balanced EPD profile and performance to boot! Out of a promising young cow who has 2@119 and bred back AI for the third year in a row. 140 has a powerful hip, deep body and strong top on him. He's one of the best we've ever raised.

Lot 2

We have been flat out impressed with the Resilient calves. We liked the maternal background that Resilient brought to the table and we are excited to see how the females do. We used him heavily again this past AI season, so expect more to come from this outstanding sire!

144 leads off a Capitalist group of nine 3/4 brothers. He catches your eye every time you walk in the pen.

A powerful heifer bull out of another promising young cow in our herd.

144 is deep in his middle and has a nice clean shoulder and smooth front end.

He's been a favorite since birth.

Cow Makers With Performance!

Elation's dam, SAV Blackcap May 1782, is a top producing cow in the SAV herd. She posts 4@112!

Elation's Pathfinder granddam, SAV May 2397, is the third top income-producing cow in SAV history. She has seven sons in major AI studs.

SAV Elation 7899
